The TAP-AIS project

Multistakeholder policy dialogue to promote
innovation in agrifood systems

Aiden Holley
Office of Innovation, FAO

Why?

Public policies shape the environment in which individuals and organizations function and interact, making them important to any initiative seeking to advance sustainable development.

Many agrifood development projects and programs aim to support positive policy changes by organizing policy dialogues. Yet, despite their importance, there is little guidance available to date on how to effectively organize policy dialogues that are inclusive of diverse stakeholders in the context of agrifood systems.

Ideally, policy dialogues and other processes seeking to influence policies should aim to promote innovation through smart, inclusive and collaboratively developed and implemented policies.

What?

Food and Agriculture
Organization of the
United Nations

Multistakeholder
policy dialogue to
promote innovation
in agrifood systems

A training guide

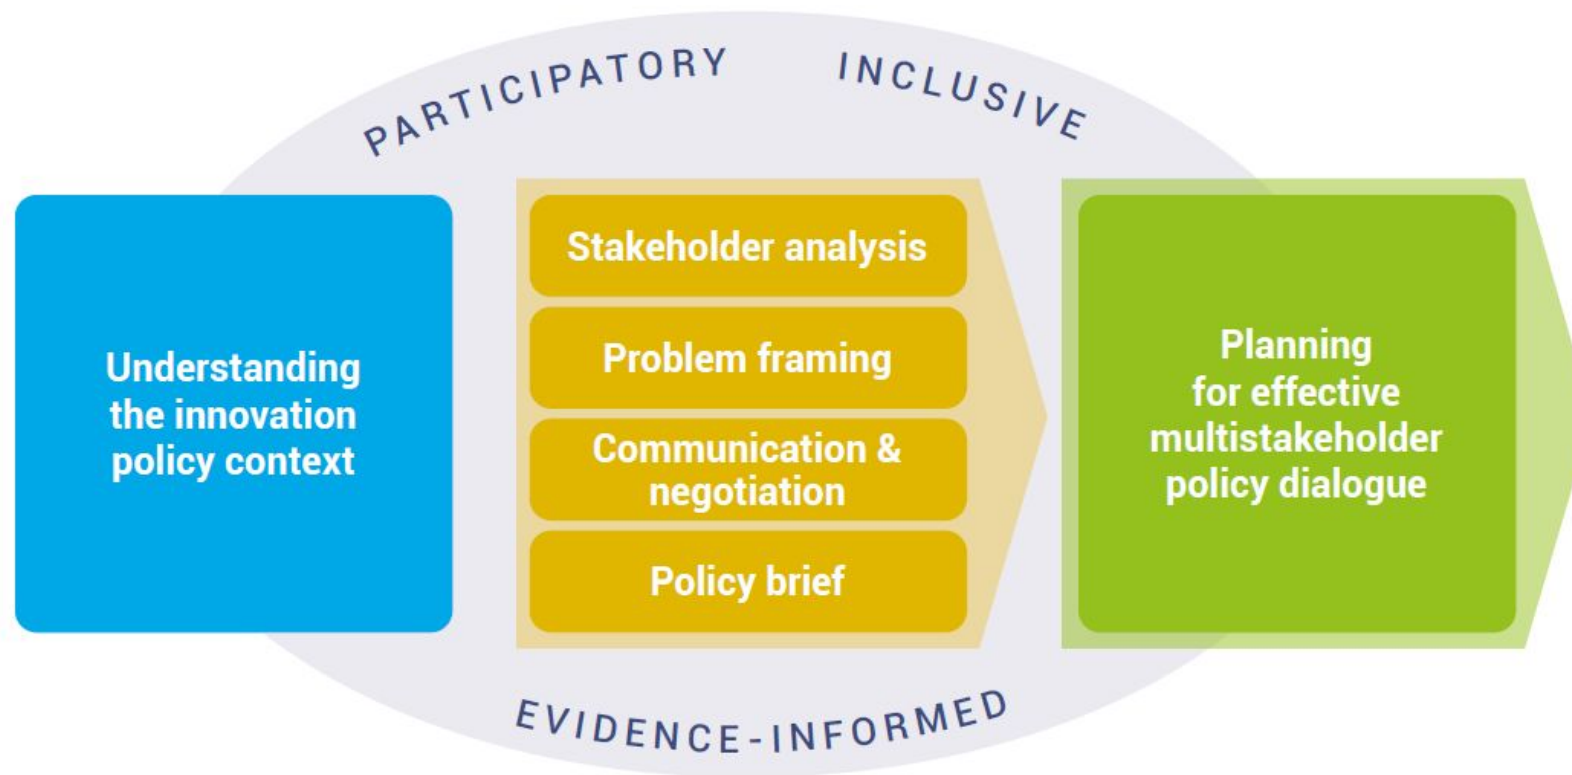

A Training Guide in six Modules based on TAP-AIS experiences with facilitating multistakeholder policy dialogue

Target audience: wide technical and non-technical audience working in agrifood development and innovation and policies.

This is a training guide and so it of course provides guidance on how to organize a training, however, it can also be interesting simply to learn about the approach to multistakeholder policy dialogue to promote innovation in agrifood systems

Outline of the guide in six Modules
